The Internet & Beyond

Thank you for taking the time to review my introduction and resume. You will find that I am a results-driven Data Analyst and Business Intelligence specialist with over a decade of experience managing complex databases and analyzing student data for K-12 education. I am adept at leveraging technical expertise and analytical skills to identify areas for improvement and implement solutions that enhance system performance and support the data-driven decision making process. I am well versed in database management, SQL/R/Python coding, and data ETL processes. I am also skilled in data visualization tools, including Tableau, Kaggle, and Excel. I am very excited to be a part of a team that collaborates with other cross-functional teams, and I am committed to delivering quality work that supports business growth and client/student success.

I hold an Associate of Science in Computer Science and I have completed the Google Data Analytics and Google Business Intelligence professional certification courses. I have also obtained CompTIA A+ and CompTIA Net+ certifications from when I was a technician, which started my strong technical foundation. My latest educational accomplishment was becoming Data Privacy certified through Global Grid for Learning, as well as I am currently enrolled in the IBM Data Sciences professional program expected to be completed by the fall. As a bonus, I am also up to date with my state and federal background checks and security clearances due to my work with K12 public entities.

As the current Data Coordinator for the Pennsbury School District, I have developed and implemented strategies to improve data accessibility, accuracy, and security. I have led security deployments to protect sensitive data and provided training and critical thinking support to enhance organizational performance. Throughout my career with Pennsbury, I have often led teams of inexperienced interns that were tasked with implementing new technologies in the district. I loved the opportunity to help educate future IT and Data professionals on what a successful project completion means with respect to budget, timelines, and stakeholder expectations.

I am confident that my skills and experience would be an asset to any team. I am a highly motivated and results-oriented individual with a strong work ethic. I am also a team player and am eager to collaborate with others to achieve business and client goals. References are always available on request, and I am looking forward to discussing how I can help grow your company!
